## Enhanced efficiency with smart bed management

By integrating real-time location services and information on a bed's status, hospitals can not only enhance the efficiency of their bed management but also improve patient safety through automated documentation.

## Legal compliance documentation in the hygiene chain

For legal compliance documentation, the sensor captures all relevant parameters such as: the bed's location and identification, the personal ID of the individual who authenticated at the bed, the date and time of authentication, and the event triggered by the person (required cleaning, disinfection or maintenance/repair).

### Product features

- ✓ **Real-time bed tracking**
- ✓ **LED status display**
- ✓ **Individual authentication**
- ✓ **Status events: cleaning, disinfection, maintenance**
- ✓ **Integration with hospital information systems and asset tracking solutions**

### Technical specifications

<b>Dimensions (WxLxD)</b>	10x10x3.5 cm (without fastening strap)
<b>Radio standard</b>	Bluetooth LE, NFC, LoRaWAN (optional)
<b>Power supply</b>	2x AA batteries, 2700 mAh
<b>protection class</b>	IP65
<b>Ambient temperature</b>	-10 until +60 °C
<b>Mounting type</b>	Fastening strap
<b>ISO/IEC 14443</b>	Mifare DESfire
