

# **Milesight IoT Cloud**

Develop Device-to-Cloud Connection

## Jumpstart IoT Solution with Milesight IoT Cloud

Milesight IoT Cloud provides unparalleled levels of vertical integration with Milesight LoRaWAN<sup>®</sup> nodes (sensors and controllers). Through field data visualization, it allows users to monitor and control remote assets on an intuitive dashboard. What's more, it enables trigger reception, report, sharing, transferring etc., offering extraordinary flexibility of managing connected devices.

Leveraging the trendsetting tech, Milesight IoT Cloud turns data into actionable insight and provides convenient, stress-free, secure, and comprehensive IoT enablement service, standing at the forefront of the global IoT revolution of today.

## **Milesight IoT Cloud Security**

Milesight IoT Cloud is a comprehensive cloud-based on AWS. It collects data from Milesight end-nodes and provides App and Web GUI for users. Data security and privacy is the highest priority at Milesight and for its users. Therefore, Milesight IoT Cloud offers a range of security mechanism to protect your data.

#### • X.509

X.509 certificates act as secure identifiers, just like digital passports which contain information about the owner. Every device uses a unique certificate that ensures all data from end nodes to Milesight IoT Cloud is well validated and encrypted.

#### • HTTPS

With functionalities of anti-spoofing and data encryption, HTTPS protocol keeps communication securely between user-end and Milesight IoT Cloud.

#### • OAuth 2.0

Milesight IoT Cloud uses OAuth for user authorization. It is an open protocol to allow secure API authorization in a simple and standard method from desktop and web applications.

#### Data Storage

Data is placed and protected by AWS, the world's leading secure cloud computing service platform.

#### Features Dashboard

The Dashboard is a user-friendly interface where admins can monitor and interact with connected devices though graphs, charts and other tools. It allows users to manage every aspect of their connected devices as well as gain insight on the environment through visualization of device data.

### **Features** Device Management

Device Management provides users with unprecedented visibility into the status and interface status of all connected end notes. Being connected to the cloud, their status will be automatically returned to the cloud platform so that users can monitor the operating status in real time to decide whether to take the next step.

Real-time Monitoring of Devices' Signal Status

Data Chart Reference & Download

Threshold Alarms' Setting

## Features Map

Map furnishes users with paramount perspective on location information of connected devices, including street address, latitude, longitude etc. The location metadata can be updated by users.

Check Online, Offline and Alarm Status

Know Any Connected Device's Deployment Places

## Features Triggers

The Trigger interface allows users to customize multiple combinations of conditions and triggers. Based on the processed data, Milesight IoT Cloud provides users with many options of trigger warnings, thus adding preventive monitoring for users.

$\square$	-
<u> </u>	-
	נ

Rich Options for "Time" or "Value" as Condition

Rich Options for "Alarm" or "Trigger" as Actions

## Features Reports

Harnessed by Reports, admins are able to check and export daily, weekly or monthly data of the connected devices that they select, and they can send or share these reports to certain people. Reports offer intuitive insight on how do these connected devices perform.

Check and Export Daily/ Weekly/Monthly Report

Share with People Connected Devices' Performance

In Sharing Center, many operations will become easy for users to conduct including adding users for cooperating, tracking all sharing, transferring devices' ownership and receiving notifications. Channels/end users can find how Milesight IoT Cloud works exactly even without an account.

Utmost Flexibility for Sharing and Transferring

**Real-time Notifications** 

### **Features** Account Management

Account Management is a place where admins can manage their basic information, setting, passwords etc at a rapid speed. In addition, the remaining number of alarm receivers, alarm e-mails, devices, triggers, and dashboards will be presented clearly and intuitively on this interface.

Better Basic Information Management

Faster Understanding of Remaining Rights

# **Milesight Indoor Air Quality Solution**

Milesight launches one-stop solution for indoor air quality (IAQ) to monitor the data of ambience air quality in real time which helps you to live in safer and healthier environment, especially during the COVID-19. With straightforward data directly shown on display and cloud platform, you can always stay informed and alert before it is too late. Through reports and analysis, you can catch the problems that you probably ignore.
